

LEAF LOADER

TRACKLESSVEHICLES.COM

The Trackless Leaf Loader is an advanced and efficient leaf loading attachment, whereby leaves are picked up curbside, mulched and blown into a truck.

The Leaf Loader can load up to four leaf debris trucks per hour and 100,000 pounds of leaves per day. After using the Leaf Loader for their leaf pick-up programs, many customers claim that they are three to four weeks ahead of schedule.

Leaves can represent up to 20% of a municipality's solid waste. Many municipalities have banned leaf disposal by landfill or incineration, and as others follow, mulching and composting will soon become a mandatory first step in leaf disposal and recycling.
