

SERIES 7

TRACKLESS VEHICLES AERATOR

If you want to build a healthy green space, the soil beneath the grass will benefit from some much-needed attention as well. Soil aeration is one of the easiest yet most beneficial maintenance tasks you can do to a lawn. Improving soil drainage and encouraging worms and microbes will help control lawn thatch and reduce soil compaction promoting root growth and a healthier, thicker top side.

The Trackless Aerator is mounted to the front of the Trackless MT allowing the operator to keep the implement in their sights providing an easier and safer alternative to tow behind models.

General Info

Aerating width: 72" (1828mm)

Aerating depth: 3" (76mm)

Pivoting tine wheels: 12

Tines: 120 - ¾" closed type

Aeration pattern: 5.5" x 6.5"

Weight: 950lbs (430kg)
