

SERIES 7

TRACKLESS VEHICLES BUFFALO TURBINE DEBRIS BLOWER

Trackless Vehicles Ltd. offers the Buffalo Turbine leaf and debris blower.

The combination of the Trackless MT and debris blower is ideal for leaf and debris cleanup in parks, cemeteries, trails and other areas where the use of larger equipment is not practical.

Installation and removal is quick and simple. The blower is driven by the front PTO shaft of the Trackless. This provides variable velocity by simply adjusting the engine rpm. Smooth rotation of the nozzle is controlled by the tractor joystick. This feature sets the Trackless Buffalo Turbine apart from all others.

The 12-inch round nozzle, as shown, is standard. A variety of optional shaped nozzles are available. Buffalo Turbine offers a 10-year warranty on their attachment.
