

SERIES 7

TRACKLESS VEHICLES TOW BEHIND SPREADER

The Trackless MT tow behind spreader has a 1 yard capacity with a spread distance of up to 22 kilometers (14 miles). It is hydraulically driven and has an electric actuator which controls the spread distance. Actuator control is located in the cab next to the joystick.

The tow behind spreader conserves material by dispersing it evenly in a diamond pattern rather than a solid layer. The delivery roller maintains a 41-inch spread width; this prevents material waste as well as turf damage from salt, both of which can be a problem with spinner spreaders.

General Info

Spread width: 40" (1016mm)

Capacity: 1 cubic yard

Spread distance: 12 to 14mph (19 to 22km)

Drive: Hydraulic

Spread pattern: Diamond

Brakes: Electric
